

MT Professional Learning Network offering:

**On-line Health Science Common Core
Training, August 11-22, 2014**

Health Science is a relatively new program in Career and Technical Education that will introduce your students to a variety of careers in the health care industry. It also prepares students with the foundation skills necessary to successfully matriculate to a post-secondary health professions program.

- This course is designed for Secondary Science or health enhancement teachers that have a collegiate background in anatomy and physiology. (Unfortunately this requirement cannot be waived as it is part of the licensure for this endorsement).
- All curriculum materials will be provided free of charge.
- During this course, teachers will be asked to accomplish a job shadowing experience at a local medical facility to gain an understanding of the healthcare system.
- Upon completion of the course, teachers can apply for a Class 4A Endorsement in Health Science from the Office of Public Instruction. The licensure fee is not part of this online training however; the fee will be prorated for this endorsement to expire with your Class 2 license.

Course Objectives:

The teacher will be given opportunity to:

1. Learn about the range of health care careers available.
2. Learn to effectively advise students in healthcare career options.
3. Demonstrate understanding of the National Consortium of Health Science Standards and Accountability Criteria including areas of health careers, communication, legal and medical ethics, wellness, teamwork, human growth and development, mental health, nutrition, infection control, and vital signs.
4. Participate in various learning activities using Common Core Standards.
5. Describe, analyze, and evaluate various teaching methods/techniques and curricula for health science education.
